- BURGERFI Cheeseburger
- BURGERFI Chili
- BURGERFI Chili + Cheese
- BURGERFI Burger
- BURGERFI Cheese
- BURGERFI Chili

**SIDE**

- Fries - Bucket
- Fries - Large

**CONCRETES**

- Urban Style
- Frises - Bucket

**FAQ**

- What is a food allergy?
- A food allergy is when your body's immune system reacts to a food protein because it has mistaken that food protein as a threat. What is an allergen?
- An allergen is any substance that causes an allergic reaction in your body. This can be food, medicine, pollen, and many other things.

---

**ALLERGEN INFORMATION**

BURGERFI Allergen Information Guide is for individuals with food allergies or those customers who have a concern about gluten. **Please note this guide is for educational purposes only.**

**What is an allergy?**
- An allergy is when your body has an undesired immune system reaction to a normal substance in the environment. These substances, called allergens, can trigger a strong immune response when introduced to your body. The most common allergens are dust mites, pollen, molds, animal dander, latex, and certain foods, like seafood, peanuts, tree nuts, and dairy.

**What Is the difference between a food allergy and an intolerance?**
- A food intolerance is when your body has trouble digesting a food. It can cause symptoms like gas, bloating, or diarrhea. A food allergy involves the immune system and can cause a range of severe symptoms, from mild to life-threatening, depending on the severity of the reaction.

**Are allergic reactions serious?**
- Not all allergic reactions are serious. An allergic reaction can be mild or severe, from a rash to swelling or anaphylaxis (a severe, life-threatening reaction that happens quickly and requires immediate treatment). Symptoms can include hives, swelling, difficulty breathing, and anaphylaxis.

**What is anaphylaxis?**
- Anaphylaxis is a severe allergic reaction that happens quickly and can be life-threatening. It occurs when your body's immune system overreacts to an allergen and releases histamine and other chemicals into your bloodstream. This can cause a range of symptoms, including swelling, breathing difficulties, hives, and anaphylaxis.

**What is an allergy to a food?”**
- An allergy to a food is when your body has trouble digesting a food. It can cause symptoms like gas, bloating, or diarrhea. A food allergy involves the immune system and can cause a range of severe symptoms, from mild to life-threatening, depending on the severity of the reaction.
